```
[root@test html]# cat /etc/hosts.allow
#
# hosts.allow    This file contains access rules
#                allow or deny connections to net
#                either use the tcp_wrappers libr
#                started through a tcp_wrappers-e
#
#                See 'man 5 hosts_options' and 'm
#                for information on rule syntax.
#                See 'man tcpd' for information c
#
sshd:192.168.24.64

[root@test html]# cat /etc/hosts.deny
#
# hosts.deny    This file contains access rules
#               deny connections to network ser
#               the tcp_wrappers library or tha
#               started through a tcp_wrappers-
#
#               The rules in this file can also
#               /etc/hosts.allow with a 'deny'
#
#               See 'man 5 hosts_options' and '
#               for information on rule syntax.
#               See 'man tcpd' for information
#
#
sshd:192.168.24.
```
